HEAVY DUTY VEHICLES

AIR JACKS FOR CARS, BUSES & TRUCKS

selson
air jacks & torque multipliers

Selson Air Jacks offer a powerful combination of speed, stability, and safety that make them the perfect choice for lifting and servicing heavy-duty vehicles in a variety of industrial and automotive applications. With advanced features such as adjustable air pressure, adjustable height control, and a reinforced steel structure, Selson Air Jacks provide superior lifting capabilities and greater reliability than other types of jacks.

QUICK OPERATION

Selson Air Jacks use compressed air to raise and lower vehicles rapidly. In heavy duty settings, where time is often of the essence, the efficiency and speed of air jacks significantly reduce the time required for tasks such as maintenance, repairs, or tyre replacements.

FOR CARS, BUSES & TRUCKS

With varying lifting and different heights, there is a Selson model to suit most applications. The hand held models that are easily stored and portable are ideal for use on alignment and frame racks and in road service vehicles. The roll around Hustler models, with long reach handles are best suited to service bays and workshops.

OVERLOAD SAFETY VALVE

Selson Air Jacks often come equipped with safety features, such as overload safety valves, that prevent accidental overloading or overinflation. This is especially crucial in heavy-duty applications where the consequences of equipment failure can be severe.

ACCESSORIES

Large Lifting Cap

Used to jack heavy vehicles under pinch-weld seam of sill section.

Part No. 184-230

Polyurethane Headcap

To suit models for for heavy vechicles, Enables ‘I’ beam axles up to 115m wide to fit between the lifting cap lugs.

230mm (9”)

24 MONTH WARRANTY

The Selson Air Jacks range also carries our standard 24 months warranty against faulty workmanship and materials, and are backed by a comprehensive service and replacement parts network.

Important! The Selson Air Jack is a lifting device only, vehicle support stands are recommended for holding loads in position

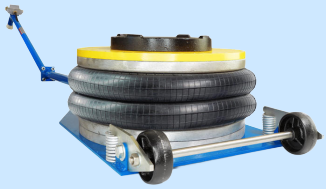
2 BELLOWS OPTIONS 3 BELLOWS

H9-5XLO



Our Heavy Duty Jack is available with a choice of 2 or 3 bellows, allowing greater control of the optimal lift height for your unique operating conditions.

Both models deliver the same proven Selson performance, with exceptional stability, durability, and reliability in demanding workshop and roadside environments.

H9-5

All Selson Air Jacks are subject to rigorous checks during manufacture and assembly. Each jack is individually tested at the maximum recommended pressure to ensure reliability and performance as specified.

WHY CHOOSE SELSON?

Designed and manufactured to exacting standards, Selson Heavy Duty Air Jacks deliver consistent lifting performance for buses and trucks. With minimal moving parts and proven safety features, they are built to perform day after day in busy workshops and service bays. Once in the lift position, the air line can be disconnected and the jack will continue to do its job. This allows the air supply to be used for any other pneumatic tools or equipment.
